Engineered (HDF) Bamboo Flooring
LIMITED RESIDENTIAL CONSUMER WARRANTY

Bamboo Flooring Products

THIS LIMITED WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS, AND YOU MAY ALSO HAVE OTHER RIGHTS, WHICH VARY FROM STATE TO STATE AND PROVINCE TO PROVINCE.

THIS LIMITED WARRANTY CONTAINS ARBITRATION AND CLASS ACTION WAIVER PROVISIONS (SEE BELOW IN SECTION 9). THIS LIMITED WARRANTY ALSO CONTAINS LIMITATIONS OF LIABILITY (SEE BELOW IN SECTION 8).

WE LIMIT THE DURATION AND REMEDIES OF ALL IMPLIED WARRANTIES, INCLUDING WITHOUT LIMITATION THE WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE TO THE DURATION OF THIS EXPRESS LIMITED WARRANTY (SEE SECTION 2).

SOME STATES AND JURISDICTIONS DO NOT ALLOW LIMITATIONS ON HOW LONG AN IMPLIED WARRANTY LASTS, SO THE ABOVE LIMITATION MAY NOT APPLY TO YOU.

OUR RESPONSIBILITY FOR DEFECTIVE GOODS IS LIMITED TO THE STORE CREDIT AS DESCRIBED BELOW IN THIS LIMITED WARRANTY STATEMENT.

[warranty information continues on following page]
1. WHO MAY USE THIS WARRANTY?
Lumber Liquidators, Inc. ("we," "us," and "our") extends this limited warranty only to the consumer who originally purchased the product ("you") and only for residential use. It does not extend to any subsequent owner or other transferee of the product. THIS LIMITED WARRANTY IS NOT TRANSFERABLE. THE LIMITED WARRANTY EXTENDS ONLY TO THE ORIGINAL END-CONSUMER. For purposes of this limited warranty, a "residential use" is a product installation at a single-family home, apartment unit, townhouse, or other place where people live and, notwithstanding the foregoing list, excludes: (a) multi-family housing common areas; (b) any real estate property that is used for business or commercial activities; (c) any location used in whole or in part for business or commercial purposes; and (d) any location where foot traffic exceeds normal, residential foot traffic. We have the sole right to make the determination of whether an application is a residential use or another kind of use. For purposes of such determination, we may need to visit the location that relates to the warranty claim for inspection and use. This limited warranty does not apply to light commercial or heavy commercial use.

2. WHAT IS THE PERIOD OF COVERAGE?
Subject to the requirements listed in Section 5 below, this limited warranty starts on the date of your purchase and lasts for the time period set forth in the chart below for your specific product (the "Warranty Period"):

<table>
<thead>
<tr>
<th>Product Identification</th>
<th>Warranty Duration</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bamboo Engineered</td>
<td>50 Years</td>
</tr>
</tbody>
</table>

If, for any reason, we repair or replace the product, the Warranty Period is not extended. We may change the availability and duration of this limited warranty at our discretion, but any changes will not be retroactive.

Where the Warranty Duration noted above provides for a "Lifetime" warranty, the duration of this limited warranty shall be the lifetime of the original purchaser so for as long as he or she owns the flooring.

3. WHAT DOES THIS WARRANTY COVER?
During the Warranty Period and subject to the complete terms of this limited warranty, this limited warranty covers the following product aspects from defects in materials and workmanship of the purchased product (the "product"):

- **Limited Finish Wear Warranty.** Finish wear from normal residential use conditions resulting in the exposure of the bare wood, subject to the exclusions provided in Section 4 below.

- **Defects Included in Waste Factor.** Manufacturing and natural defects in excess of the Waste Factor (defined below). For purposes of this limited warranty, "Waste Factor" shall mean the allowance for manufacturing and natural defects in flooring and is represented by a percentage—namely, that: (i) no more than 5% of the total square footage of your purchase of 1st-grade, 2nd-grade, natural, select, and clear grade products; (ii) no more than 20% of the total square footage of your purchase for 3rd-grade, common, rustic, mill run, and mixed-grade; (iii) no more than 25% of the total square footage of your purchase of cabin grade, tavern grade, and utility grade products. For purposes of clarity, the Waste Factor does not relate to product waste caused by your cutting the product for your intended project or use. Rather, the Waste Factor relates to the stated percentage of the product as purchased that a purchaser can expect to have manufacturing or natural defects. Your cutting allowance (that is, the inherent waste created by your cutting the product) is not a defect or deficiency and will depend on your project and your use of the materials.

- **Delamination.** The product will not delaminate under normal residential use conditions.
4. WHAT DOES THIS WARRANTY NOT COVER?

This limited warranty does not cover any defects or damages due to: (a) failure to strictly follow the Installation and Care Requirements (defined and discussed below) regardless of the installer; (b) transportation; (c) storage; (d) improper use; (e) modifications; (f) unauthorized repair; or (g) external causes such as accidents, abuse, or other actions or events beyond our reasonable control. In addition, this limited warranty does not cover any defects or damages due to the following:

- **Moisture (or Lack of Moisture).** Damages caused by moisture (such as leaking pipes, spills, wet mopping, pets, relative humidity, subfloor moisture etc.) are excluded. Moisture (and dryness) can cause issues such as checks, cupping, crowning, warping, buckling, peeling, twisting, seam swelling or gapping. In addition, moisture intrusions from concrete hydrostatic pressure, flooding, or plumbing leaks, along with high levels of alkalinity, can affect flooring and subflooring over time and moisture can be trapped below the flooring and/or underlayment and create mildew or mold. Damage from such conditions, including to the floor and subfloor, is not covered under this limited warranty.

- **Site and Environmental Conditions.** Defects or damages resulting from: site conditions (such as extreme heat, radiant heat, or exposure to sand); indentations and scratches (caused by furniture, appliances, tools, grit, heels, toys, etc.); improper maintenance and accidents; misuse and abuse. These items are not covered under this limited warranty.

- **Within Waste Factor.** Defects in flooring that do not exceed the Waste Factor (defined above) are not covered under this limited warranty. Consequently, it is recommended that you add the applicable percentage to your total square footage when ordering your floor.

- **Other Finishes.** This limited warranty covers the factory-applied finish only. Applying another finish or sanding (such as in preparation for another finish) may damage the factory-applied finish and voids this limited warranty against finish wear.

- **Exterior Use.** This limited warranty does not cover exterior use of the product.

- **Non-Flooring Installations.** Except where the product’s Installation and Care Requirements designate the product as appropriate for wall installation, this limited warranty does not cover use of the products for installations on ceilings or other usages for purposes other than flooring (like furniture or countertops).

- **Visible Defects.** As discussed further below in Section 5.C., products installed with visible defects are not covered under this limited warranty. Accordingly, before installation, you and the installer should examine each product to ensure it is satisfactory.

- **Natural Characteristics.** Wood and bamboo are natural products. They may change as a result of the conditions to which they are exposed including seasonal and environmental factors. Color changes due to aging or exposure to UV/sunlight may also occur. In addition, natural variations from board to board, like differences in grain, color, tone, and knots, may exist.

- **Expansion and Contraction.** As a product of nature, wood and bamboo react to changes in temperature and humidity. Small gaps between planks are a normal occurrence with changes in relative humidity. These gaps are seasonal and show up primarily in the winter when cold temperatures lower the relative humidity in the air. Wood and bamboo flooring perform best at relative humidity rates between 30% and 50% and temperatures between 60°F and 80°F (not to exceed a 20% fluctuation in relative humidity), before, during and after the installation and remain at such levels throughout the life of your floor to ensure optimum performance. Please note that ideal interior environmental conditions will vary from region to region and jobsite to jobsite, the relative humidity figures on your project may be higher or lower. You must ensure that the change in relative humidity stays within a 20% range (e.g.30% to 50%) and does not fluctuate beyond 20% for sustained periods, which may affect the flooring. Home environments where the relative humidity drops below 25% are not recommended or subject to coverage under this limited warranty. Seasonal homes...
or leaving a building/structure unoccupied without climate control for extended periods of time can lead to damage to the floor from excessive humidity build-up or extremely dry conditions. Both scenarios can damage the floor, cabinets, and furniture.

- **Color and Shade Variations.** New or replacement flooring may not always match samples, printed color photography (including websites and catalogs), existing flooring or other products (such as cabinets, stair railings, trim and moldings) due to, among other things, natural variations that occur in species, age, growing conditions, exposure to UV/sunlight and other factors. These variations should be expected. Inspect product before installation. Claims for color and shade variation will not be accepted after the product is installed.

- **Fading.** This limited warranty does not cover fading from exposure to sunlight or discoloration due to use of rubber-backed mats.

- **Odd Lots.** An odd lot is flooring that is discounted because it did not pass our rigorous inspection process and is not covered by this limited warranty.

- **Third-Party Purchases.** This limited warranty does not cover any purchases other than those made directly from Lumber Liquidators in store, online, or by phone.

- **Radiant Heat.** This limited warranty does not cover any products installed over radiant heat.

- **Outdoor Installation.** Outdoor and partial outdoor installations of the product void this limited warranty and are not covered.

- **Removal and Replacement.** This limited warranty does not cover the cost of the removal or replacement of countertops, cabinets, built-in appliances or other fixtures, installed on top of your floor.

- **Improper Installation and Maintenance.** This limited warranty does not cover any dissatisfaction or damage due to improper installation or maintenance. This includes any damages caused by any installation (regardless of the source of the installation advice) that conflicts with the applicable industry installation standards and product installation instructions—for example, damage caused by sub-surface, sub-flooring and jobsite environmental deficiencies, improper transportation, acclimation and storage.

5. **HOW DO I MAINTAIN THIS WARRANTY DURING THE WARRANTY PERIOD?**

To maintain this limited warranty during the Warranty Period, you are obligated to meet all of the following requirements for your use, installation, and maintenance of the product (the “Installation and Care Requirements”).

The Installation and Care Requirements must be strictly followed for the limited warranty to remain valid and not be void.

A. **Follow the Pre-Installation Requirements.** Prior to installing a single board, tile, or product, you or the installer must determine that the job-site environment and the sub-surfaces (including subfloor substrates) meet or exceed applicable industry and product standards, including, without limitation, moisture testing and controls. The product installation instructions discuss these standards and are provided in full below. These requirements must be strictly followed.

B. **Comply with All Laws.** In your installation, maintenance, and use of the product you must comply with all laws and regulations, including, without limitation, all applicable environmental and building codes, regulations and laws.

C. **Inspect All Products for Visible Defects.** Products installed with visible defects are not covered under this limited warranty. Accordingly, before installation, you and the installer should examine each product to ensure it is satisfactory. If any products are unacceptable for any reason, it is up to you to determine to use them, hide them in areas like closets, trim off the imperfection, or not install them at all. You should plan on being present during your installation to ensure that all required procedures are completed and products with visible defects are not installed. It is important to inspect individual boards and tiles and to frequently step back to observe the “whole picture” before installation is completed. If quality issues are
suspected before or during installation immediately contact the store where your floor was purchased or call us at 1-800-366-4204.

D. **Follow the Installation and Care Instructions.** It is your duty to make sure the installation requirements are strictly followed, including, without limitation, as they relate to the use of moisture barriers, installation tools such as nailers and trowels, and the evaluation of job site conditions and moisture testing. The product’s installation and care manual(s) are provided in this document below, and those terms and provisions are part of this limited warranty.

6. **WHAT ARE YOUR REMEDIES UNDER THIS WARRANTY?**

With respect to any defective product during the Warranty Period, we will provide a Lumber Liquidators store credit in the amount of the purchase price paid for the defective portion of the flooring (excluding any installation costs and labor) in excess of the applicable Waste Factor (defined above). A store credit is the sole remedy under this warranty and can be used for store product purchases only. Provided, however, we reserve the right, in our sole discretion, to repair or replace such product (or the defective part) free of charge in lieu of a store credit. We will also pay for shipping and handling fees to return the repaired or replacement product to you if we elect to repair or replace the defective product.

There is no guarantee that the same or a similar product to the original flooring will be available at the time a store credit is issued or redeemed.

We reserve the right to investigate, assess, and validate reported claims by, among other things, requesting samples from you for technical analysis and performing an inspection of the flooring and installation location.

7. **HOW DO YOU OBTAIN WARRANTY SERVICE?**

To file a warranty claim during the Warranty Period, you may:

A. Visit the store where you purchased your floor;
B. Call us at 1-800-366-4204; or
C. Email via the “contact us” link at www.llflooring.com.

Claims must be submitted within the Warranty Period and within ninety (90) days of the date that the problem with the floor is first discovered. No warranty claim will be serviced without contacting us through one of the methods listed above and providing accurate and complete information in a timely manner.

8. **WHAT ARE THE LIMITATIONS OF LIABILITY?**

THE REMEDIES DESCRIBED ABOVE IN SECTION 6 ARE YOUR SOLE AND EXCLUSIVE REMEDIES AND OUR ENTIRE LIABILITY FOR ANY BREACH OF THIS LIMITED WARRANTY. NOTWITHSTANDING ANY OTHER PROVISION OR TERM, OUR LIABILITY SHALL UNDER NO CIRCUMSTANCES EXCEED THE ACTUAL AMOUNT PAID BY YOU FOR THE DEFECTIVE PRODUCT OR DEFECTIVE PORTION THEREOF.

UNDER NO CIRCUMSTANCES SHALL WE BE LIABLE FOR ANY CONSEQUENTIAL, INCIDENTAL, SPECIAL OR PUNITIVE DAMAGES OR LOSSES, WHETHER DIRECT OR INDIRECT. WITHOUT LIMITING THE FORGOING SENTENCE, LOSSES, DAMAGES OR EXPENSES RELATING TO ANYTHING OTHER THAN THE FLOOR ITSELF ARE NOT COVERED, INCLUDING, WITHOUT LIMITATION, MISSED TIME FROM WORK, HOTEL STAYS, STORAGE FEES, KENNEL COSTS FOR PETS, REMOVAL OF DEFECTIVE FLOORING, INSTALLATION OF REPLACEMENT FLOORING, OR REMOVAL OR REPLACEMENT OF ITEMS BUILT ON TOP OF ANY FLOORING (FOR EXAMPLE, COUNTERTOPS, CABINETS, BUILT-IN APPLIANCES).

SOME STATES AND JURISDICTIONS DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATION OR EXCLUSION MAY NOT APPLY TO YOU.
9. TERMS OF DISPUTE RESOLUTION

NO JOINT OR CLASS ACTIONS: Neither you nor Lumber Liquidators shall be entitled to join or consolidate claims in arbitration by or against other customers of Lumber Liquidators with respect to other accounts, bring mass, class action, or consolidated claims in arbitration or a court of competent jurisdiction, or arbitrate or litigate any claim as a representative or individual of a class or in a private attorney general capacity. The arbitrator may not consolidate more than one person’s claims and may not otherwise preside over any form of a representative or class proceeding.

ARBITRATION: The following informal dispute resolution procedure is available to you if you believe that we have not performed our obligations under this limited warranty. You must use this informal procedure before pursuing any legal remedy in the courts.

Lumber Liquidators and you agree to attempt to resolve any disputes amicably. If, after thirty (30) days we are unable to do so, then you and Lumber Liquidators each agree that any claim or controversy of any sort relating to our agreement, the Products or these limited warranty terms shall be determined by arbitration in the nearest U.S. city to the Lumber Liquidators store where you purchased the products, before one arbitrator. At the option of the first to commence an arbitration, the arbitration shall be administered either by JAMS pursuant to its Streamlined Arbitration Rules and Procedures, or by the American Arbitration Association pursuant to its Commercial Arbitration Rules. The arbitrator shall have no power to add to, delete from or modify these limited warranty terms. Each of us shall have the right to conduct discovery to which we would be entitled had the dispute been resolved in a state court of general jurisdiction in the state of the Lumber Liquidators store where you purchased the products. Judgment on the arbitrator’s award may be entered in any court having jurisdiction. This clause shall not preclude either party from seeking provisional remedies in aid of arbitration from a court of appropriate jurisdiction. The arbitrator may, as part of the award, allocate all or part of the costs of the arbitration, including the fees of the arbitrator and the reasonable attorneys’ fees of the prevailing party. The arbitrator shall only have the authority to resolve individual disputes between you and Lumber Liquidators. Notwithstanding the foregoing, in addition to our rights set forth above, we may initiate proceedings directly in the appropriate court located in the U.S. city nearest the Lumber Liquidators store where you purchased the products in connection with any claim to collect amounts due and owing by you.

10. NO OTHER TERMS

SAMPLES, DESCRIPTIONS, AND OTHER INFORMATION CONCERNING THE PRODUCT CONTAINED IN CATALOGS, ADVERTISEMENTS, OR OTHER PROMOTIONAL MATERIAL OR STATEMENTS MADE BY SALES REPRESENTATIVES OR DISTRIBUTORS ARE FOR GENERAL INFORMATIONAL PURPOSES ONLY AND ARE NOT BINDING UPON LUMBER LIQUIDATORS. NO SALES REPRESENTATIVES, STORE MANAGERS, ACCOUNT REPRESENTATIVES, OR DISTRIBUTORS SHALL HAVE ANY AUTHORITY WHATSOEVER TO ESTABLISH, EXPAND OR OTHERWISE MODIFY LUMBER LIQUIDATORS’ WARRANTIES. THE TERMS OF THIS LIMITED WARRANTY DOCUMENT MAY NOT BE AMENDED EXCEPT THROUGH A WRITTEN AGREEMENT TITLED “AMENDMENT TO LIMITED WARRANTY” AND SIGNED BY AN AUTHORIZED OFFICER OF LUMBER LIQUIDATORS, PROVIDED, HOWEVER, THAT LUMBER LIQUIDATORS MAY GENERALLY MODIFY, CANCEL, UPDATE, OR OTHERWISE CHANGE ITS PROSPECTIVE WARRANTIES FOR FUTURE SALES AT ANY TIME AND FOR ANY REASON.

11. OTHER PROVISIONS

The section headings provided in this limited warranty are for convenience and informational reference only and shall and shall not affect the interpretation or construction of this limited warranty.
THE PROVISIONS OF THIS LIMITED WARRANTY ARE DEEMED TO BE SEVERABLE AND THE INVALIDITY OR UNENFORCEABILITY OF ONE PROVISION SHALL NOT AFFECT THE VALIDITY OR ENFORCEABILITY OF ANY OTHER PROVISION.

12. ADDRESS FOR LUMBER LIQUIDATORS
Lumber Liquidators, Inc. is located at 4901 Bakers Mill Lane, Richmond, VA 23230.
Acclimate Completely
Acclimate your flooring to your home environment. Time for acclimation will vary. Always check using a meter. Acclimation will ensure your flooring looks great for years to come.

Install Correctly
Take time to review Lumber Liquidators' installation guidelines and follow the National Wood Flooring Association Guidelines to ensure that your installation goes well from beginning to end.

Maintain Environment
The ideal Relative Humidity (RH) range for Engineered Bamboo is 30%–70% at a temperature of 60°–80°F. It is acceptable in some households that this range may be higher or lower, but extreme fluctuations in RH must be avoided.

Need Help? To obtain installation assistance or product information concerning this flooring, contact the store of original purchase, or call the Lumber Liquidators customer care at 800-366-4204.

WARNING! DO NOT SAND, DRY SWEEP, DRY SCRAPE, DRILL, SAW, BEADBLAST OR MECHANICALLY CHIP OR PULVERIZE EXISTING RESILIENT FLOORING, BACKING, LINING FELT, ASPHALTIC “CUTBACK” ADHESIVES OR OTHER ADHESIVES. These products may contain asbestos fibers and/or crystalline silica. Avoid creating dust. Inhalation of such dust is a cancer and respiratory tract hazard. Smoking by individuals exposed to asbestos fibers greatly increases the risk of serious bodily harm. Unless positively certain that the product to be removed is a non-asbestos containing material, you must presume it contains asbestos. Regulations may require that the material be tested to determine asbestos content. See current edition of the Resilient Floor Covering Institute (RFCI) publication, “Recommended Work Practices for Removal of Resilient Floor Coverings” for detailed information and instructions on removing all resilient covering structures. For current information, go to www.rfci.com.

LEAD WARNING: Some paints and finishes in homes built before 1978 may contain lead. Exposure to excessive amounts of lead dust presents a health hazard. Prior to removing or sanding, comply with all applicable federal, state, and local laws, and reference the publication “Lead-Based Paint: Guidelines for Hazard Identification and Abatement in Public and Indian Housing” available from the United States Department of Housing and Urban Development regarding (1) appropriate methods for identifying lead-based paint and removing such paint; and (2) any licensing, certification, and training requirements for persons performing lead abatement work.

MOLD AND MILDEW WARNING: Prior to removing an existing resilient floor or when installing a new floor, if there are visible indications of mold or mildew or the presence of a strong musty odor in the installation area, the source of the problem should be identified and corrected before proceeding with the flooring work. Excessive moisture in the subfloor could promote mold, mildew, and other moisture related issues like the trapping of moisture emissions under the flooring, which may contribute to an unhealthy indoor environment. Mold has the potential to cause health problems and may produce allergens, irritants, and in some cases, potentially toxic substances. Before installing the new resilient flooring, ensure the underlayment and/or subfloor is allowed to thoroughly dry and that any residual effect of excessive moisture, mold, or structural damage has been corrected. Remediation measures may require structural repairs such as replacing the contaminated underlayment and/or subfloor, cleanup measures using appropriate protection and biocide, or hiring a professional mold and mildew remediation contractor. Consult EPA mold guidelines on EPA’s website at https://www.epa.gov/mold

WARNING:
Drilling, sawing, sanding or machining wood products can expose you to wood dust, a substance known to the State of California to cause cancer. Avoid inhaling wood dust or use a dust mask or other safeguards for personal protection. For more information go to www.P65Warnings.ca.gov/wood
RECOMMENDED USE:

- Residential or light commercial* interior use only. *See the product’s limited warranty for details.
- Do not install in wet areas like patios and showers, or exterior areas. **Do not install in boats, moving vehicles or over radiant heat.**

GRADE:

On, above and below grade.

### JOBSITE CONDITIONS:

- The building should be enclosed with all doors and windows in place.
- **Prior to delivery and install:** All wet works (e.g. drywall taping, texture, painting, stucco etc.) should be complete and allowed to dry. The rooms should be at normal “lived-in” conditions with HVAC operational for at least one week prior to the installation when home is so equipped.
- When installing in rooms over basements and garages, ensure they are dry and well ventilated.
- Crawlspace must be dry with a minimum 18” from the bottom of the floor joist to the ground. Crawl space earth (or thin concrete slab) should be covered 100 percent by a vapor retarder of black polyethylene (minimum 6 mil) or any recommended puncture-resistant membrane, such as Class C, meeting ASTM D1745. Ventilation shall be per local building codes.
- Ensure that exterior doors and appliances have sufficient clearance to accommodate the new flooring.
- Do not undercut metal door jambs before first confirming it doesn’t violate local building and fire codes.
- To avoid damages to the floor’s finish, all construction activity should be completed before installing this floor.
- All gutters should be in place and functioning properly. Yard grading should be sloped to run water away from the home foundation.
- The installer - not the manufacturer or retailer - is responsible for making sure that the site conditions are appropriate prior to installation of this floor.

### ACCLIMATION: 48 Hours

- Stack boxes no more than eight cartons high in areas to receive new flooring (remove plastic from outside of boxes if present). Ensure each layer is evenly supported to prevent distortion. Elevate stack using 2 x 4’s as illustrated in Fig. 1 above. On concrete; place a layer of 6 mil poly down first during the acclimation process.
- Extended acclimation time may be required. *Time is not the determining factor; moisture testing is required to confirm that product is acclimated. Use a meter that is species adjustable, E.g. Ligno-scanner SDM or mini-Ligno DX/C moisture meter. If using alternate meter check with the meter manufacturer that it can be used with the wood species that you are installing.
- Check the moisture content of multiple planks. It’s recommended to randomly test 40 planks for every 1000 square feet of flooring, the flooring’s average moisture content must be within 4% of the subfloor, or if concrete, wood-based products in the home (e.g. Base Board or Door Jambs).
- Keep a permanent record of all readings.

### TEMPERATURE:

For best product performance, ensure the temperature in the home is between 60º and 80º F before, during, and after installation and for the life of the flooring.

### RELATIVE HUMIDITY:

For best performance, flooring should be ideally conditioned, installed and maintained to consistent indoor temperatures of 60º- 80ºF and relative humidity of 30% - 70% (not to exceed a 40% fluctuation in relative humidity, before, during and after the installation and for the life of the flooring. Ideal interior environmental conditions will vary from region to region and jobsite to jobsite, the relative humidity figures on your project maybe higher or lower.

The key is to ensure that the change in relative humidity stays within a 40% range (e.g.30% to 70% or 25% to 65% etc…) and does not fluctuate beyond 40% for sustained periods, enough to affect the flooring. Home environments where the relative humidity drops below 25% are not recommended.

Not following the written recommendations can negatively impact board performance and may result in excessive movement, squeaks, board gapping, board-edge cupping, cracks, twists, finish splits, flaking, chipping, fading and other related issues.

Any home that may have a sustained change in relative humidity greater than 40% fluctuation needs an HVAC system equipped with a humidifier or dehumidifier to regulate the interior environment within a 40% range of fluctuation. Installing hardwood in an environment that is not maintained can be detrimental to the flooring.

The map below can be used to calculate what the optimum baseline or average moisture content of interior wood products should be prior to installation for each state and region. The first number indicates the average moisture content of wood during the wintertime (months having lower humidity), and the second number indicates the average moisture content during the summer time or (months having higher humidity). To calculate the optimal baseline or average wood moisture content in your state or region, add the high season number and low season number together then divide by two. Example: If your state or region has an expected low of 6% to a high of 12% moisture content, the average baseline moisture content of the wood before installation would be 9%. The goal is to acclimate the flooring to this average figure and then the installation can begin.

Very dry or humid regions of the country usually require extended conditioning to balance the new flooring to the environment it will service.
The most reliable moisture-content numbers will be obtained using a species-specific moisture meter to determine the moisture content of the wood flooring. The USDA moisture map is a helpful guide for installations. Without proper temperature, humidity and ventilation controls, actual moisture content in any location may differ significantly from these numbers. In all cases it is the installer or homeowner's responsibility to determine if the indoor environment, moisture content and jobsite conditions are suitable for wood floor installations.

**Summer / Winter Moisture Map**

The effects of Temperatures and Humidity on wood flooring

Wood products are sensitive to moisture, temperature and humidity. Refer to the chart below to better understand the best in-home environmental relationship between relative humidity (RH) and temperature and its effects on wood moisture content. Determine the current temperature and RH within your home with a hygrometer. Find the combination of temperature and RH in your area on the chart (temperature variations are listed on the left side of the chart, humidity variations are listed along the bottom).

Example: The target or ideal moisture content for wood products is shown in the shaded area to be within 6.1% to 9.4% Wood flooring will perform best when the interior environment is controlled to stay within a relative humidity range of 30% to 50% and a temperature range of 60° to 80° Fahrenheit. (In some geographical areas, the ideal humidity range might be higher or lower, 25% to 45% or 45% to 65% for example.) It is critical to maintain the relative humidity in your home to not fluctuate more than 20% at any given time of the year. Hardwood flooring installed in areas with a wider variation in RH (fluctuation in RH of more than 20%) can negatively impact board performance and may result in excessive movement (expansion / contraction, squeaks, board gapping, board-edge cupping, finish splits and other related issues).

**Moisture Content of Wood at Various Temperatures and Relative Humidity Readings**

Relative Humidity (RH percent)

**CUTTING ALLOWANCE and MANUFACTURER TOLERANCE (waste factor):**

A 10’ x 10’ room has net 100 square feet (Sq. Ft.) – the actual area that will have flooring – but more product is required to allow for cutting which generates unusable pieces.

Carefully measure the net square feet required, adding up multiple areas.

The table gives an approximate recommendation for cutting allowance:

Quantities are always rounded up to the nearest box.

**Note:** Engineered Natural products generally have a 5% manufacturer tolerance which should be added to the Cutting allowance.

If defects are greater than the waste factor indicated for your flooring, please contact your local store or call Customer Care at 1-800-366-4204.

**Tip:** If more than half a box is not available for spares we recommend ordering an extra box.

**Please note:** Actual cutting waste may be lower or higher based on room layout. E.g. multiple rooms vs. one large area and “pattern” being installed.

Consider carefully before returning boxes. Keeping extra boxes is a great idea and inexpensive insurance against damage if a repair is needed. The product and batch will be the same, and you have options even if the product has been discontinued.

Diagonal installations may require 5% extra material over and above the cutting and manufacturer tolerance allowance.

**EXPANSION SPACE AND CONTRACTION OVERLAY:**

Allow 1/2” gap and 1/2” overlay between the flooring and all vertical obstructions (walls, door jams, pipes, staircases, posts, fixtures, built-ins, etc.) when installed as a “floating” floor. See examples below of 1/2” expansion gap and contraction overlay.

If the room has electric baseboard heaters, leave a minimum of 3/4” between the surface of the flooring and the bottom of the heaters, allowing heat to circulate properly.

**NOTE:** Gapping and buckling can develop if expansion space and contraction overlay are not followed requirements are not followed.
RUN LENGTH AND WIDTH:
Floating Applications: 22’ maximum in length and 22’ in width of continuously connected flooring.

NOTE: When installed in a “floating” application: this flooring cannot be glued, nailed, screwed or otherwise fixed or attached (e.g. door stopper, closet-track, stair rails, etc.) to the subfloor in any way. It must have room to expand and contract freely. Gapping and buckling can develop if expansion space and t-moldings, requirements are not followed.

CABINETS / FIXED FIXTURES:
• Do not install under fixed cabinets or islands of any type.

SUNLIGHT:
This flooring may change color “patina” with prolonged exposure to sunlight. Use of window coverings, shades, or tinting your windows, is recommended to slow this process.

SUBFLOORS NEED TO BE CLEAN – FLAT – DRY:
• All substrates must be structurally sound and free from movement or deflection.
• Subfloors must be flat within 1/8” over 6’, and 3/16” over a 10’ span.
• Improper substrate or flatness can result in gaps, squeaks, premature wear on surface and poor plank fitting during assembly.

WOOD SUBFLOOR:
• Screw down loose or squeaky sections of plywood and replace areas that are damaged.
• To address flatness concerns sand or plane high spots, 15 - 30 lb. roofing felt can be used to build up (in layers) low areas on wood subfloors.
• Substrates that are un-level due to structural deficiencies should be repaired by a licensed contractor.
• Never apply plastic sheet over wood subfloors.

STRUCTURAL REQUIREMENTS:
Note that joist spacing determines minimum subfloor thickness.

Joist spacing 16" on center (OC) or less
– Plywood: Minimum of (5/8”, 19/32") Oriented Strand Board (OSB): minimum (3/4", 23/32")
– Advantech minimum (3/4", 23/32")

Joist spacing 16" up to 19.2" (OC)

Joist spacing over 19.2"up to maximum 24" (OC)
– Plywood: Minimum of (7/8") Oriented Strand Board (OSB): Minimum of (1") or two layers of subflooring or brace between truss/foists in accordance with local building codes.

MOISTURE TESTING:
Use a meter that is species / material adjustable. E.g. Ligno-scanner SDM or mini-Ligno DX/C moisture meter.

• If using alternate meter check that meter can be used with the subfloor material in question.
• Test sub-floor in multiple locations, with an appropriate wood moisture meter, it’s recommended to test 20 location per 1000 square feet and average the results. Moisture readings must not exceed 12%.
• Higher readings indicate a moisture concern that needs to be addressed before installation can begin.
• For future reference, documenting and saving the test results is recommended.

CONCRETE SUBFLOORS:
A 6 mil virgin polyethylene moisture barrier – seams overlapped 4” - 6” and taped using a water resistant adhesive tape (e.g. duct tape) must be used (underlayment’s with a vapor retarder still require this moisture barrier).

• To address flatness concerns; Grind down high spots using a Diamond Grinder (Shroud and Vacuum) and fill in low spots with an appropriate Portland cement-based patch or self-leveler.

LIGHTWEIGHT ALTERNATIVE SUBFLOORS (Float Only):
• Installation over gypsum-based slabs is limited to above grade, floating installations only. Do not use 6mm poly over lightweight concrete e.g. Gypcrete use gypsum-based patch or self-leveler (allow to cure fully) prior to installing floor.

*CAUTION: Follow OSHA guidelines (29 CFR 1926.1153) regarding silica dust hazards.

EXISTING FLOORS:
• This flooring can be floated over existing clean, flat, dry, and well bonded/secured tile flooring, vinyl flooring, and hardwood flooring that have a “wood” subfloor underneath.
• Do not install over cushioned vinyl flooring, or existing floating floor products.
• Do not install over carpet and padding.

RECOMMENDED PATCHES / LEVELING COMPOUNDS:
• Cement Patching- Bostik WebcreteR 95™
• Total Surface Self-Leveling- Bostik SL-175™ (plus Primer Pro)

Follow manufacturer's TDS / installation guide.

UNDERLAYMENT:
• Underlayment padding is required. Your local store can advise on best solution for your situation.

NOTE: Cushioned “vapor retarder” underlayments are not a substitute for a 6 mil polyethylene moisture barrier. Please call Tech support @ 1-800-366-4204 for any additional underlayment recommendations.

USER / OWNER / INSTALLER RESPONSIBILITIES:
• Install in good lighting.

Claims will not be accepted regarding visual defects after flooring has been installed. If any planks are unacceptable due to color, finish, milling or any other reason, it is your responsibility to determine to use them, hide them in areas like closets, trim off the imperfection, or not install them at all.
• The use of putty, stains, wood blend sticks or markers to touch-up prefinished wood flooring before, during and after installation is considered normal practice.
• You should plan on being present during your installation to ensure that all required procedures are completed and boards with visible defects are not installed. It is important to inspect individual boards and to frequently step back to observe the “whole picture” before installation is completed.
• A reasonable amount of installed flooring (up to 25% or 100 sq. ft. whichever is less) is enough to determine acceptance of quality.
• Retain a box label and keep on file with your receipt for future reference.
• If quality issues are suspected stop the installation and call your local store or CUSTOMER CARE at 800-366-4204.

HELPFUL TOOLS (as needed):
• Tape measure • Pencil • Chalk line • 6’ level • Miter saw • Table saw • Jig saw • 60 tooth carbide tip saw blades • Jamb saw • Eye protection • Ear protection • Niosh dust mask • Knee pads • Gloves • Blue painters tape (2080) • PVA wood glue • Compressor with regulator • Air hose • Floor nailer • Brad / Stapler • Drill • Drill bit set • Hammer • Flat pry bar • Broom • Hygrometer (to monitor in-home humidity) • Species adjustable moisture meter (wood) • Calcium chloride moisture or (RH) Relative Humidity test (concrete) • Approved adhesive remover • Wood putty • Stain markers • Speed square • Cloth rags

ADDITIONAL NOTES:
• When moving furniture and heavy equipment, use luan board, plywood, or other similar covering to protect the floor.

Each project is unique and different. Installation advice or recommendations are given as a courtesy and not intended to take the place of an installer’s visual inspection, expertise or informed judgment, which will override any advice or recommendations given in the Installation Guidelines. The end user / contractor on-site is ultimately responsible for ensuring that selected products are appropriate for local conditions and / or the final use of the product.
How to Assemble Engineered Bamboo Quick Click Planks

**Tongue**

1. Insert tongue into groove at approx. 20° angle.

**Groove**

2. Push down while applying forward pressure to fully engage planks.

**PROFILE (END VIEW)**

**GETTING STARTED:**

When required, remove baseboard. Remove any existing quarter round, shoe molding and doorway transitions. Remove existing floor covering as required. Check that all doors will swing open with adequate clearance over the new flooring prior to starting any work.

**IMPORTANT:** Any metal doors must be addressed by a specialist to adjust. Do not cut metal door frames.

Undercut all door casings and door jams with a jamb saw to allow the flooring planks to slide under the door jamb. If a baseboard is still in place, extend the undercut about 1” beyond the door frame casing. If no baseboard, just cut the door casing. Important: Do not cut metal doorframes!

Undercut all door casings and door jams with a jamb saw to allow the flooring planks to slide under the door jamb. If a baseboard is still in place, extend the undercut about 1” beyond the door frame casing. If no baseboard, just cut the door casing. Important: Do not cut metal doorframes!

To find the height to cut the jamb, lay a scrap piece of flooring (and underlayment, if used) next to the door frame, and lay the saw blade on top. After cut ensure that the floor plus underlayment does not bind, always leave 1/16” clearance under the door jamb / casing for the floor to be able to float freely without vertical restriction. Adjust as required.

**STEP 1:**

Check that subfloor is flat to within specifications per details found under “CLEAN-DRY-FLAT” in previous section.
Correct any issues.

**STEP 2:**

Install 6 mil polyethylene film vapor barrier if subfloor is cement.

*Never install 6 mil poly over wood substrates!*  
**NOTE:** Cushioned “vapor retarder” underlayments are not a substitute for a 6 mil polyethylene moisture barrier.
STEP 3:
Install customer preferred cushion.

STEP 4. LAYOUT:
Determine which direction the planks will be installed. Generally, plank flooring is run parallel with the longest straight exterior wall, or the focal point of the room. Considerations are fireplaces, doors, cabinets, transitions. For best appearance full planks are desirable at the focal point and most cases it is the longest unbroken wall in the room.

INSTALLERS! It is advisable to determine the installation layout and direction (North/South vs East/West).

Preparation of planks for the starting row when needed:
Always remove tongue from first row of planks.
To avoid very narrow pieces at finish wall; measure the distance between the starting wall to the finish wall, then divide this number by the width of the flooring planks. The fraction is the width of the last plank.

E.g. for an 8’ room:
Start – Finish = 104” – 1" (1/2" expansion x 2) = 103"
Width of Plank = 5"
103 ÷ 5 = 20.6
Twenty full planks are required and last will be fraction x plank width
5" x 0.6 = 3"
If width of last plank is less than 2.5”, balance by cutting (Rip) starting row of planks accordingly.

NOTE: If a narrow strip is unavoidable for the last row, the final two rows can be glued together using Exmore Tongue and Groove adhesive or PVA wood glue at the long seams to avoid board separation.

ESTABLISH A WORKING LINE:
In at least two places, measure out equal distance from your starting wall, 12”–18” from each corner.
The distance from the starter wall to the line will be the width of the plank used on first row, the expansion space. Mark these points and snap a chalk line (as shown) parallel to your starting wall. Be sure to maintain proper gap around all vertical obstructions, e.g. newel posts, raised hearths, upright pipes, etc.

STEP 5.
Use spacers to maintain the recommended expansion gap between the flooring and the walls. Place spacers adjacent to each plank joint and at the beginning and end of each row. This will lock-in assembled panels and prevent shifting during installation.
It is important to have your starting row perfectly straight and properly supported against your starting wall. Always allow a proper gap around all other fixed objects including upright pipes or other fixtures.

Tip: Scrap flooring (cut up in short strips) may be used for additional spacing material.

STEP 6. THE FIRST ROW:
Install planks from left to right, up against the spacers.
A Lay the first plank in the left-hand corner, up against the spacers, with the groove side facing toward you.
B. Align and overlap end-joint of second plank.
C. Lower plank “straight” down, be sure joint is even and flat.

Continue laying the first row until you reach the other wall.

NOTE: See STEP 9. for how to cut the last plank in row.

STEP 7. SECOND & CONSECUTIVE ROWS

Confirm the first row is straight with working line. Start the second row with the remainder of the last plank in the first row, ensuring this piece is at least 8” long. If not, cut a new starter plank. Slide plank to the left to butt up against the 1/2” spacer. Insert the tongue of this plank into the groove along the edge of the first plank in the previous row at a 20 degree angle. Align and overlap end-joint of second plank, insert tongue at angle into groove of previous row and lower to the floor. Be sure the ends of the boards are in proper alignment; if boards do not overlap properly (see image above), lift and reposition, then firmly lower into position. (Be sure to engage end seams flat).

STEP 8. IMPORTANT:

IMPORTANT: When laying planks, stagger the end joints from row to row by at least 12” to ensure the structural integrity of your floor and a pleasing appearance.

Pay close attention to avoid “stair step” or “H-patterns” appearing in the flooring.

FLOORING (Racking):

After installation of the first three rows, “rack-out” about 100 sq. ft. of flooring approx. 4” or 5” away from the last secured row.

Pull from several boxes to mix board color to create a random look.

STEP 9. CUTTING END-OF-ROW BOARDS

The last board in each row must be cut to fit, while still maintaining a 1/2” expansion gap at the walls.

Here’s how:

1. Flip the plank over, end-to-end.
2. Lay the flipped board next to the row of planks and mark it on the face.
3. Cut the plank at the mark.
4. Flip the plank back over and install as normal.

STEP 10.

When you are unable to angle planks to install them (under door jambs, toe kicks, radiators etc.), shave off the locking edge lip in the groove by using a saw or sharp chisel. Apply a thin–even bead of PVA Tongue & Groove Adhesive along the modified groove as shown

* Remove any wax (if present) using denatured alcohol.
STEP 11.
The last row will need to be cut lengthwise to fit properly. Here’s how to get it just right:
A. Lay a plank right on top of the last full row in place.
B. Then lay another plank of flooring on top of that plank, with the tongue side touching the wall.
C. Use plank B as a straight-edge guide, and mark a line lengthwise on plank A.
D. Cut plank A lengthwise on line.
E. Plank A can now be installed as the last row. We recommend you use edge glue for this last row.

STEP 12.
To ensure the floor is able to “float” freely, be sure to affix baseboards or moldings to the walls, not to the floors. This way, the floor can expand & contract within the gap.
Also, never nail the first or last rows directly down to the subfloor! This option is not appropriate for floating floors!

STEP 13. TRANSITIONS
In areas where your new floor meets other types of flooring, such as carpet or tile, select an appropriate molding to get a professional looking and safe transition.
Threshold moldings transition from floor to carpet and are used at sliding doors, raised hearths, etc.
Overlap Reducer moldings transition from floors to hard surfaces that are lower than the floor, such as vinyl or VCT tile.
Overlap Stair nose moldings must be used for all “floating” installations. E.g.: when the flooring meets at the top of a stairway.
T-Moldings cover expansion spaces at doorways, and they transition from your new floor to other hard surfaces of similar height.
3/4" Quarter Round moldings are used to cover expansion spaces between the baseboards and the flooring.
CARE AND MAINTENANCE GUIDE

Engineered Bamboo Flooring is designed to bring beautiful wood looks to your environment to fit your flooring needs and style, while also providing a solution with easy maintenance.

Created for residential and light commercial applications, this flooring is extremely durable but still requires care and attention to keep it looking beautiful for years to come.

For day to day cleaning we recommend the floor to be swept and/or vacuumed. The vacuum head must be a felt brush type. Do not use vacuum with beater bars / very hard bristles. This will eliminate fine particles of dirt and grit that act like sandpaper which will scratch and / or dull the surface of your flooring.

Reduce the visibility of minor scratches using Bellawood Scratch Away.

Minimize abrasive material and dirt by placing mats on both sides of exterior doors and by using area rugs in high-traffic areas.

Use Bellawood Floor Cleaner to deep clean your whole floor and clean spots and soiled areas.

DO NOT use cleaning agents containing wax, oil or polish. Leftover residue will form a dull film.

DO NOT use steel wool or scouring pad, as they will scratch the floor.

DO NOT use steam or wet mops.

Floor protectors should always be installed to the bottom of furniture to prevent scratching and marking.

We recommend the use of a hard surface (non-studded), non-rubber chair mat to protect your floor from office chairs with casters.

Light, rolling furniture should be outfitted with broad-surface, non-staining casters that have been engineered for hard surface floors (casters should be a minimum of 1" wide and at least 2" in diameter.

Never slide or roll heavy furniture or appliances across the floor.

If flooring will be exposed to rolling traffic or heavy, appliances protect the flooring with plywood or hardboard panels.

As your floor ages, color change or “patina” can occur.

Whether finished or unfinished, all wood changes color over time due to oxidation and when exposed to UV light. Some species darken in color over time, while others tend to lighten. There is no known set value for “color fastness” of a species, so contractors and or customers should be aware of this normal condition. Certain species, including American cherry, Koa, Brazilian cherry, and many imported species, have this tendency to change in color. Some color change is to be expected for all species and a drastic change can be expected for some. This “Patina” process although normal, can be minimized by limiting exposure to direct sunlight or accelerated by exposure. Periodically moving furniture and rugs will help to equalize overall exposure to UV light. If possible avoid completely covering floors with rugs for the first six months.

You should always promptly remove spills using a soft cloth reducing slip hazards.

We love our pets but occasionally accidents happen.

• Cleaning the affected area should begin immediately upon discovery:
• Use absorbent paper tissue to collect as much of the deposited material as possible and properly dispose of it. Remove any existing residue with a suitable disinfesting cleaner.
• Repeat until all residue is removed. Buff dry. Clean, using Bellawood Floor Cleaner.
• The more time that elapses before removal, the more difficult a stain will be to remove.
• Keep pets’ nails trimmed.

We recommend the use of NON-RUBBER backed mats that are labeled “colorfast” by the manufacturer. Non-staining, vinyl-backed mats or woven rugs should be used at all door entries from outside to avoid discoloration from asphalt driveways, catch dirt, grit, sand, and other debris to help sustain the flooring.

We also recommend using protective mats around sinks and tubs to catch excess water and debris.

Remove shoes with cleats, spikes or exceptionally pointy heels before walking on the floor.
